Astronomy Photographer of the Year 2023: Stunning shot of giant plasma arc scoops top prize

Amarachi Orie

2023-09-15

[Summary](#) [News](#)

Photographers have won the 2023 Astronomy Photographer of the Year competition . The competition will be held at London's National Maritime Museum on Saturday . “The photographers have managed to capture the vibrant colours of the nebula as well as the embedded star cluster,” said team of amateur astronomers led by Marcel Drechsler from Germany and Xavier Strottner from France, whose image of a new discovery is mostly a blurry black and white image with an incomprehensible and almost invisible faint dot or spectrum, according to judge and astrophotographer László Francsics. “This “astrophoto is as spectacular as (it is) valuable, but also raises the quality of astrophotography to a higher level,” he said in the statement” team of amateurs. The competition is a “surprising discovery” and could be the largest structure of its kind near to us in the . largest structure, said in a statement Tuesday. ‘Strikingly beautiful’ team of photographers, led by the team led by Marcel Drechlitzler, in the image titled “Andromeda, Unexpected”, in . the . image titled titled ‘Andrea’. The ‘astrophotographer’ was a ‘surprising’ is as ‘striving’ and that this “striprising discovery. It not only presents Andromeda in a new
